Jeremiah Carey

Software Engineer · Frontend & AI-Native Interfaces
Orlando, FL (Remote) · (530) 302-7339 · jeremiah.a.carey@gmail.com · linkedin.com/in/jeremiah-carey-ab3221158

SUMMARY

Frontend-focused software engineer building production web applications, most recently AI-native interfaces: an in-platform LLM-powered app builder with streaming chat, agent clarifying-question flows, and live previews of generated apps. Comfortable across the spectrum, from extending a large legacy frontend platform to owning greenfield features across the stack. Former philosophy PhD and university instructor who brings rigorous analytical thinking and clear written communication to engineering work.

EXPERIENCE

Software Engineer 05/2023 – Present
Annalect (Omnicom) | New York, NY (Remote)

- Frontend engineer on an AI app builder that lets non-technical users generate and deploy custom web apps through chat with an LLM agent; built the human-in-the-loop flow that lets the agent pause and ask users clarifying questions, and contributed to the streaming chat UX and template/tutorial onboarding.
- Led the frontend side of hardening the app builder's untested prototype for production: broke up its monolithic generation logic and main chat view across six small, independently reviewable PRs and raised frontend unit test coverage from 0% to over 75%, all without pausing feature delivery.
- Led a greenfield Q&A platform ("Ask the Collective"): built the full frontend (rich-text editor, replies, filter/sort, sharing, permissions) and extended its Python/FastAPI backend.
- Designed and built the platform's email notification system: AWS SES setup and domain verification, backend trigger logic, subscribe/unsubscribe, and one-click unsubscribe. Diagnosed and fixed an intermittent production delivery failure that couldn't be reproduced locally.
- Extended the platform's cross-frame messaging library (postMessage API) so embedded micro-frontend apps sync their routes to the parent URL, making deep links, bookmarks, and back-button navigation work for iframed apps for the first time.
- Designed a configurable, responsive carousel web component in Lit (navigation modes, cards per view, arbitrary slotted content) that was adopted across the platform, and led frontend work on the configurable homepage content block it anchors.

Visiting Assistant Professor, Philosophy 08/2017 – 05/2020
Siena College | Loudonville, NY

- Taught undergraduate courses in introductory philosophy, ethics, and the history of philosophy.
- Published peer-reviewed research and presented at academic conferences.

SKILLS

Languages: TypeScript, JavaScript, Python, HTML, CSS
Frontend: React, Next.js, Lit / Web Components, Zustand, SWR
Backend: REST APIs, Flask, FastAPI, Postgres, AWS SES
AI: LLM chat & streaming (SSE) interfaces, human-in-the-loop agent UX, Claude Code, GitHub Copilot
Tooling: Git, GitHub Actions, Vite, Vitest, Supabase, Vercel, Chrome Extensions

PROJECTS

DocLens www.doclens.net
Chrome extension that analyzes Google Docs revision history to surface writing patterns associated with AI-assisted content. Built the parsing logic and UI tools that let instructors review editing timelines and writing behavior.

SchoolBrief (in development) www.schoolbrief.app
AI-powered tool that summarizes school communications for families and surfaces key updates in a dashboard. Designing a full-stack pipeline that ingests emails and generates concise summaries with LLM workflows.

EDUCATION

University of California, Berkeley | Ph.D., Philosophy 2017
The Florida State University | B.A., Philosophy 2007
